AMUSEMENT RIDE SERIES

BUMPER CARS

Two power systems for every venue — battery operated cars that run anywhere, and electric floor grid cars built for non-stop arena operation.

01

BATTERY OPERATED

Rechargeable on-board battery. Runs on any flat floor, indoors or out.

02

ELECTRIC FLOOR GRID

Powered through the arena floor. Continuous running, no charging.

03

AIR BUBBLE BUMPER CAR

Game-style ride with laser battle, LED light effects and seat vibration.

MODEL 01 · BC-BAT

BATTERY OPERATED BUMPER CAR

A self-powered bumper car driven by a rechargeable on-board battery. It needs no special power floor or ceiling grid, so it can run on any smooth, level surface — mall atriums, event grounds, rooftops and outdoor plazas.

24V DC

INDOOR + OUTDOOR

see page 6 for reference photos

KEY FEATURES

- No power floor or ceiling grid required
- Works on tiles, epoxy, concrete or any flat surface
- Operator remote for start / stop of all cars
- Soft-start acceleration and 360° spin
- Seat belt and full rubber / air bumper ring
- LED lighting and music
- Intelligent charging protection
- Optional laser-battle mode with LED score display
- Easy to relocate between venues

TECHNICAL SPECIFICATIONS

Power system	Rechargeable on-board battery
Voltage	24V / 48V DC
Battery type	Maintenance-free gel or lithium-ion
Motor	2 × 650 W (typical; varies by model)
Charging time	Approx. 4 hours
Running time	6 – 8 hours per charge
Speed	5 – 8 km/h
Riders	2 (adult + child)
Max load	150 kg
Car size (L × W × H)	approx. 1280 × 1150 × 550 mm
Body / chassis	FRP fibreglass or PP/ABS · steel frame
Area per car	approx. 2 m² of floor space

Typical market values; final figures depend on the chosen model.

BEST SUITED FOR

Shopping malls | **Melas & events** | **Outdoor plazas** | **Multipurpose halls** | **Rental operators**

MODEL 02 · BC-FPU

ELECTRIC FLOOR GRID BUMPER CAR

Also called a ground-grid or Floor Pick-Up (FPU) bumper car. The arena floor is laid with alternating positive and negative metal strips; brushes under each car pick up low-voltage power as it drives, so cars run all day with no batteries and no overhead poles.

see page 6 for reference photos

48V DC FLOOR

NON-STOP RUNNING

KEY FEATURES

- Unlimited running time — no charging breaks
- No batteries to maintain or replace
- No ceiling grid or poles — suits low ceilings
- Safe low-voltage DC floor
- Central console switches all cars on / off
- Lower day-to-day operating cost
- RGB lighting, seat belt and emergency stop
- Heavy-duty FRP body with full rubber bumper
- Ideal for permanent indoor arenas

TECHNICAL SPECIFICATIONS

Power system	Floor Pick-Up (FPU) electrified floor
Voltage	48V DC (FPU systems max. 60V DC)
Floor	Alternating +/– metal strips with insulating spacers
Power pick-up	Array of contact brushes under the car
Motor	350 – 1200 W (by car size)
Running time	Continuous while floor is powered
Speed	Up to 12 km/h
Riders	2 (two children, or adult + child)
Car size (L × W)	1600 × 1200 mm to 2000 × 1200 mm
Rider height	Min. 110 cm to drive
Body / chassis	FRP fibreglass · anti-rust steel frame
Minimum arena	6 × 6 m (kiddie) · 10 × 10 m (family)

Typical market values; floor grid installation is quoted per arena size.

MODEL 03 · BC-ABB

AIR BUBBLE BUMPER CAR

A round air bubble bumper car built for game-style play. Riders use a remote control handle and interact with the game screen, while LED banner lights, laser shooting battle, a supercar roar and seat vibration add to the thrill.

48V DC

LASER BATTLE

see page 6 for reference photos

KEY FEATURES

- Remote control handle gameplay
- Game screen interaction
- Colourful LED flowing banner light effect
- Laser shooting battle
- Throttle control light
- The roar of a supercar
- Seat vibration
- Available in red, blue, green, purple and yellow

TECHNICAL SPECIFICATIONS

Power system	Rechargeable on-board battery
Battery	Chaowei+ 48V53A
Working time	5 – 6 hours
Size	Dia. 1700 × H 790 mm
Colours	Red, blue, green, purple, yellow
Gameplay	Remote control handle, game screen interaction
Features	LED flowing banner light, laser shooting battle, throttle control light, supercar roar, seat vibration

SIDE-BY-SIDE COMPARISON

BATTERY VS FLOOR GRID VS AIR BUBBLE

FEATURE	01 BATTERY OPERATED	02 ELECTRIC FLOOR GRID	03 AIR BUBBLE BUMPER CAR
Power source	Rechargeable on-board battery	Electrified metal floor strips	Rechargeable battery
Voltage	24V / 48V DC	48V DC (max. 60V DC)	48V DC
Running time	6 – 8 h, then approx. 4 h charging	Continuous, all day	5 – 6 h per charge
Floor needed	Any smooth, level surface	Dedicated grid floor	No grid floor needed
Ceiling	No requirement	No overhead grid; low ceilings OK	No requirement
Typical speed	5 – 8 km/h	Up to 12 km/h	On request
Indoor / outdoor	Both	Indoor (covered arena)	On request
Mobility	Portable — move to any venue	Fixed installation	Portable — battery powered
Upfront cost	Lower — no floor to build	Higher — floor grid installation	On request
Operating cost	Battery replacement over time	Lower; no batteries	Battery replacement over time
Maintenance	Daily charging, battery care	Keep floor strips and brushes clean	Daily charging, battery care

CHOOSE BATTERY IF...

- You need a ride that can move between sites
- The venue floor can't be modified
- You want to run outdoors or at events
- You want the lowest start-up investment

CHOOSE FLOOR GRID IF...

- It is a permanent indoor arena
- You run long hours with heavy footfall
- You want no charging downtime
- You want lower long-term running cost

CHOOSE AIR BUBBLE IF...

- You want a game-style, interactive ride
- You want laser battle and screen gameplay
- You want bold LED, sound and seat effects
- You want a battery car with no grid floor
